

DOM EXERCISE 2

Skills: DOM, event handlers, arrays

Using plain old HTML & CSS, set up a form and two ordered lists like this, however, start with empty lists...

Name:

Type: ☒ Fruit ☐ Vegetable

Fruits

1. Orange
2. Apple

Vegetables

1. Carrot
2. Peas
3. Bean

Now, write JavaScript so that each time the form is submitted, a new item with the given name is added to the list selected by the type radio buttons.

Hint: First get it working with just always adding to one of the lists, then figure out the radio button selection.
